025023-00001	1	Commercial beekeeper near Frostproof, FL reported unusual number of dead bees. Colonies near orange groves. Each of 80 colonies has had adult bee population reduced by 60% leaving only hive bees. Queens are still laying, so owner expects colonies to recover. Loss of forage bees will prevent production of honey crop. Complainant believes adjacent grower has been careful but others may not have been. Other losses have been attributed to Montana Insecticide. Apiary inspector agreed that losses appeared to be due to pesticide poisoning. Beekeeper was out of the country but estimates the kill had been going on for at least a week. Colonies still alive have substantial declines in field forage force. Complainant did not witness use of Admire nearby, but heard about its use from other beekeepers.	N		03/15/2013	WEST OF VERO BEACH		FL	US	ON	129099	Imidacloprid		ADMIRE?

Bayer also observed some but less severe losses at its research bee hives nearby in Monheim. Clothianidin was detected at higher levels than imidacloprid in dead bee corpses. Bayer says evidence suggests off-label use in flowering rapeseed. Only 1 clothianidin spray product is registered in Germany and it is not marketed by Bayer. Incident is under investigation.
